LINK CEILING

Link is designed to function as a standalone design and create new patterns the more you have on the ceiling or wall. The straight wires create a contrast to the round shapes, and through the wires, a completely new expression is achieved. By placing them straight, a linear design is created. By varying the wire direction, the design becomes more abstract. The design of the wires is inspired by the sound waves they are meant to absorb.

PRESCRIBED TEXT

Wire mesh Link

Designed wire mesh added with sound absorber with Ø750 mm and thickness 50 mm. Roof mounting.

Model with threads that continue outside the frame frame: Outer dimension frame 772 mm. Inner dimensions frame: 752 mm. Longest width: 1086mm.
