

## LINK CEILING

Link is designed to function as a standalone design and create new patterns the more you have on the ceiling or wall. The straight wires create a contrast to the round shapes, and through the wires, a completely new expression is achieved. By placing them straight, a linear design is created. By varying the wire direction, the design becomes more abstract. The design of the wires is inspired by the sound waves they are meant to absorb.

### PRESCRIBED TEXT

#### Wire mesh Link

Designed wire mesh added with sound absorber with Ø750 mm and thickness 50 mm. Roof mounting.

Model with threads that continue outside the frame frame: Outer dimension frame 772 mm. Inner dimensions frame: 752 mm. Longest width: 1086mm.
