

LAUNCHING FLOOR SCREEN FOR THE HEALTHCARE SECTOR

IN THREE DAYS, GOTESSENS DESIGNED AND PRODUCED THEIR NEW FLOOR SCREEN ADAPTED FOR THE HEALTH CARE SECTOR: SCREENIT HEALTH & CARE. MATERIAL AND FUNCTIONS ARE ESPECIALLY CHOSEN TO SUIT THESE TYPES OF ENVIRONMENTS.

ULRICEHAMN 2020-03-30

Last week Gotessons launched a new floor screen, ScreenIT Health & Care, responding to a demand from the health care sector around Europe.

– If ever there was a time our product versatility proves to be valuable it's now, says Gotessons' Sales Director John de Boer.

ScreenIT Health & Care is a floor screen adapted to suit the health care sector. The screen is made of a wood frame, filled with 30 mm soft core material and then dressed in vinyl or polyurethane, making it easy to disinfect and wipe clean.

– We worked towards a clear goal and chose material and functions thereafter. The screen needed to work in the health care sector, which is why we chose these materials as the outer layer and a different approach to connect the screens than we usually use, explains Tomas Svensson, Product Manager at Gotessons.

The screen's long sides are provided with press studs to enable an unlimited number of screens to be connected and screen of larger or smaller spaces, such as health care facilities and waiting rooms. To make them easy to move around and store, ScreenIT Health & Care can be chosen mounted on wheels or on feet. Another conscious detail is the air gap between the bottom of the screen and floor when it's mounted, this simplifies cleaning.

Technical data for the product:

- Long durability
- Durable material
- Press studs for connecting screens
- Air space between screen and floor for easy cleaning
- Can be disinfected
- Mobile

Production has begun and the screens will be stocked.

ScreenIT Health & Care is already available to download as a BIM object www.bimobject.com/gotessons
